

Scanning a whole book or chapter

How to capture a full book and let the audio director do the rest.

- Name the book, choose printed or handwriting, then flip pages as wobble saves each one.
- Wobble matches page one against the wobble database and public-domain libraries to skip ahead where it can.
- Once saved, the audio director casts a voice per character and places music and effects.
- Navigate by chapter, and re-cast any character's voice in the who's who panel.
