

# Sharing books and setting required reading

How to get a text onto every student device and track who has finished it.

- Scan the book once on any device, page by page, in wobble read.
- Wobble checks the wobble database and public-domain libraries first, which often skips scanning entirely.
- Open the class dashboard, choose the book, and share to the class, a group or one student.
- Set a due date to turn it into required reading.
- Check the reading hours view to see who has read, for how long, and how far they got.
